

## **AMENDMENTS TO THE ABSTRACT**

Please delete the Abstract section of the specification and replace with the following:

A system for providing a co-location service comprises a plurality of switching hubs for changing public IP address into private IP address, a plurality of giga lines for connecting the switching hubs, a L4 switch for performing the server load balancing, a customer server connected to the L4 switch by means of the private IP networks and a GLB server for finding a shortest path for a client computer.
